

HI-MACS® Defies the Laws of Gravity with “Dizzy” Tables

Swedish firm Karl Andersson & Söner once again turns to the acrylic stone for its creations

The aspiration of the prestigious Swedish firm Karl Andersson & Söner is “to create furniture with a strong identity and unique character that will outlive passing trends.” These characteristics are clearly reflected in Dizzy, one of the brand’s latest creations.

Designed by Federico Churba, Dizzy is a set of three side tables in different sizes. The pieces comprise a removable round tray manufactured in HI-MACS® Alpine White, supported by a white steel structure, but what makes these tables really appealing is the fact that they lean slightly, defying the force of gravity. Dizzy conveys an amazing optical illusion that gives it movement and offers different impressions depending on the angle from which it is viewed.

With pure, geometric lines, these tables fuse the simplicity, functionality, and elegance that is so characteristic of Karl Andersson & Söner's Scandinavian design. The high durability and resistance of HI-MACS® fits in perfectly with the Swedish manufacturer's philosophy: "to create furniture that will survive use and wear over time." The acrylic stone was also ideal for creating Dizzy's unique trays, thanks to its extraordinary thermoformability, seamless joints, and smooth feel.

Dizzy reaffirms the trust placed in HI-MACS® by Karl Andersson & Söner, which had already opted for the acrylic stone for its BUFF and CERCO collections, the latter of which was also designed by Federico Churba.

HI-MACS® by LG Hausys

Surfacing the World

www.himacs.eu

HI-MACS® is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high performance wall-cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of acrylic, natural minerals and pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for aesthetics, fabrication, functionality and hygiene – offering manifold advantages over conventional materials.

HI-MACS® provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid and David Chipperfield**, among others, have completed fabulous projects using HI-MACS®, from kitchens to bathrooms, including decorative items, in hotels as well as in museums, shopping centres and on external façades.

LG Hausys' HI-MACS® uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades - exhibits a special translucency when exposed to light. Although HI-MACS® is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HI-MACS® is manufactured using a new generation technology, the **thermal cure**. The temperature reached during the manufacturing process sets HI-MACS® apart from other solid surfaces and creates a denser, even more homogeneous, sturdy, durable surface – with a better resistance and superior thermoforming performance.

As regards hygiene, HI-MACS® does not absorb humidity, is highly resistant to stains, and is easy to clean, maintain and repair.

Countless internationally recognized certificates attest to the quality of HI-MACS® in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official **European Technical Approval (ETA) for façades** – for Alpine White S728 colour.

HI-MACS® offers the longest warranty on the solid surface market with a 15-year warranty for products fabricated and installed by a member of the HI-MACS® Quality Club.
