

The new and elegant copper finish of the Noon basin from Not Only White with HIMACS

After the success of the **Noon collection** from **Not Only White with HIMACS**, the Dutch brand has been inspired by the elegance and subtlety of its models to design a **new version of the Noon model**. This latest new launch from the company, designed by Marike Andeweg and in collaboration with the solid surface material with LX HAUSYS, is coated in a thin layer of copper and seeks to give bathrooms a sophisticated hint of colour.

The new version of the Noon model, like the original, is made from HIMACS, chosen from a wide variety of materials because its properties mean it is possible to create **uniform pieces that are totally seamless**, among other advantages. This characteristic gives the basin a completely pure and smooth surface, allowing it to be positioned on a worktop or directly on the wall.

A classic from this brand, with its traditional shape and the fact that it is the smallest round basin in the collection, the new model is also distinctive for its copper coating, achieved thanks to the use of the new **Synergy 3D technology that enabled the coating to be 3D printed**. With its subtlety and delicacy, this thin layer of copper gives the basin a bright reddish gleam that contrasts with the white of the solid surface. This play between contrasts and colours turns the Noon basin into the hero of the bathroom, transforming it into a stylish and minimalist space.

HI·MACS

The model is available in white with a copper coating, and it is possible to combine it with all kinds of colours and textures. It comes in a single size, **424 mm in diameter and 160 mm in height.**

A bathroom needs the highest standards of hygiene and functionality - which HIMACS meets with ease. Its completely seamless finish provides a totally smooth surface, preventing the accumulation and spread of dirt, mould and bacteria. Moreover, its resistance to the most aggressive cleaning agents guarantees a long-lasting durability.

For use in bathroom fixtures and fittings, the robustness, hygiene and functionality of HIMACS make it the most highly recommended solid surface material.

PRODUCT INFORMATION:

Collection name: Noon Collection, from Not Only White

Design: Marike Andeweg, Not Only White

Production: Not Only White

Material: HIMACS Alpine White

Dimensions: 424-mm diameter x 160-mm height

Price: €1,486.00 excluding VAT, RRP

HIMACS Solid Surface

www.himacs.eu

HIMACS is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high performance wall-cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of minerals, acrylic and natural pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for quality, aesthetics, fabrication, functionality and hygiene – offering manifold advantages over conventional materials.

HIMACS provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid, Marcel Wanders** and **David Chipperfield**, among others, have completed fabulous projects using HIMACS.

At the forefront of innovation as always, LX Hausys recently introduced two new products. First **HIMACS Ultra-Thermoforming**, an innovative formula that pushes the boundaries of solid surface shaping to a whole new level, with 30% more thermoplastic capabilities - the biggest innovation for the Solid Surface history since its inception in 1967. Now, **HIMACS Intense Ultra**, combining the characteristics from two disparate worlds: **Intense Colour Technology** and **Ultra-Thermoforming**.

HIMACS uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades - exhibits a special translucency when exposed to light. Although HIMACS is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HIMACS is manufactured using a new generation technology, the **thermal cure**. The temperature reached during the manufacturing process sets HIMACS apart from other solid surfaces and creates a denser, even more homogeneous, sturdy, durable surface – with a better resistance and superior thermoforming performance.

HIMACS does not absorb humidity, is highly resistant to stains, and is easy to clean, maintain and repair.

Countless internationally recognized certificates attest to the quality of HIMACS in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official **European Technical Approval (ETA) for façades** – for Alpine White S728 colour. Furthermore, HIMACS has obtained the French **QB certification** and **CSTB ATec “Avis Technique”** for facade applications.

HIMACS offers a 15-year warranty for products fabricated by a Quality Club Member.

HIMACS. Because Quality Wins.
