

‘Volare’ with HI-MACS® - Aran Cucine

Elegance and design.

Born out of the experience of **Aran Cucine**, one of the most prestigious kitchen furnishings producers, and the new generation hi-tech material **HI-MACS®** produced by LG Hausys, the new version of the **Volare** kitchen is an iconic concept designed to blend forcefully and seamlessly into the most contemporary and sophisticated environments.

Volare, one of Aran Cucine’s most popular models, has a renewed appearance while maintaining its soft, voluminous shapes and the elegance and practicality that have always distinguished it.

The white base, the HI-MACS® worktop and the vertical columns give a sleek and dynamic look to the kitchen. The cabinet system, in oak-backed white, creates a structured balance of visual harmony and stability between the kitchen and the living areas.

The new generation acrylic stone, HI-MACS® played an important part in this restyling, facilitating the creation of a contemporary design product of outstanding functionality. The composition of HI-MACS® ensures maximum strength and solidity, while at the same time the non-porosity of its surface prevents the infiltration of dirt and bacteria.

With HI-MACS® 'transformed' for this project by **DFORM** and in its Alpine White colour variant, Volare can easily be placed at the centre of any kitchen and living environment, giving an ethereal, floating sensation of light stillness.

Delicacy, attention to detail, thorough and meticulous research, all combined with the versatility that makes a great kitchen.

HI-MACS® by LG Hausys

Surfacing the World

www.himacs.eu

HI-MACS® is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high performance wall-cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of acrylic, natural minerals and pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for aesthetics, fabrication, functionality and hygiene – offering manifold advantages over conventional materials.

HI-MACS® provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid and David Chipperfield**, among others, have completed fabulous projects using HI-MACS®, from kitchens to bathrooms, including decorative items, in hotels as well as in museums, shopping centres and on external façades.

LG Hausys' HI-MACS® uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades - exhibits a special translucency when exposed to light. Although HI-MACS® is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HI-MACS® is manufactured using a new generation technology, the **thermal cure**. The temperature reached during the manufacturing process sets HI-MACS® apart from other solid surfaces and creates a denser, even more homogeneous, sturdy, durable surface – with a better resistance and superior thermoforming performance.

As regards hygiene, HI-MACS® does not absorb humidity, is highly resistant to stains, and is easy to clean, maintain and repair.

Countless internationally recognized certificates attest to the quality of HI-MACS® in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official **European Technical Approval (ETA) for façades** – for Alpine White S728 colour.

HI-MACS® offers the longest warranty on the solid surface market with a 15-year warranty for products fabricated and installed by a member of the HI-MACS® Quality Club.
